

## Object Calculator

Objects:

In the file you had a number of functions

Functions: local structures - Esoteric output

Abstract: bigger picture lesser detail

Abstract Complexity - trivial

Locality: ever within object

Structures: data - the arrangement

Object: things going into and out of.

```
private :  
    Int b;  
    Int c;      (gates)  
  
public:  
    a()
```

This also is going to use a stack operator, the stack operator is a last in first out principle.  
Push, pop, popping the top and pushing back onto the stack.
